MOR Maintenance Operations Research**

Concrete Cloth

Concrete Cloth composite mats are a material that makes it possible to use concrete on slopes, in water, and in other hard-to-reach locations, without forms, mixing concrete and with minimal equipment requirements. The Concrete Cloth is easily cut and secured in place, making it ideal for reinforcing or rehabilitating a culvert, drainage ditch, bridge abutment, berm or other structure. Once hydrated, the cloth cures quickly to form a rigid, durable shield that is water-resistant up to 5,000 psi. District 6 plans to test and evaluate this product in rusted out corrugated galvanized pipes to determine its effectiveness, durability and whether or not it extends the life of the pipe.
